

Website Redesign RFP (February 6, 2026)

Project Overview

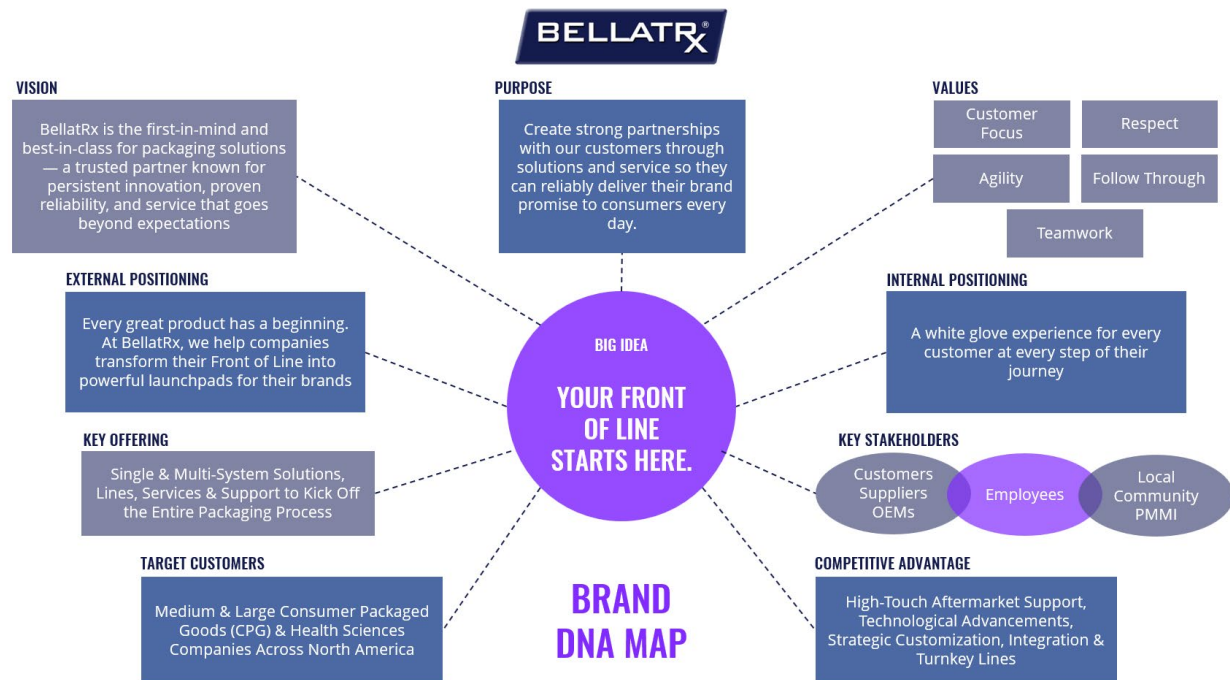

The BellatRx website was last redesigned in 2022 and has performed well; however, as the business has evolved, the current site architecture no longer fully reflects our expanded product portfolio, solutions, and customer journey.

Additionally, the website was built using an embedded and rigid template structure, which limits flexibility in page layout, navigation, and scalability as new products, technologies, and content are introduced.

Project Objectives

- A user experience consistent with our Brand DNA Map, shown below, with a focus on “white-glove” experience
- Reorganize site architecture to better align with how customers search, evaluate, and engage with BellatRx
- A mobile-first design that looks great on desktops as well
- A robust aftermarket section for high-value interactions with customers
- More emphasis on line integration projects following our Front of Line Campaign (an increasingly larger piece of business where customers buy multiple machines)
- Clean industry paths and custom/interconnected content for conversion based on our industry strengths across key focused markets (Pharmaceutical, Nutraceutical, Biotechnology & Diagnostics, Food, Beverage, Cosmetics, Chemical, Personal Care) to support quote volume goals for each segment
- Custom journeys for Marketing Qualified Leads for high-value Lead Magnet offering
- Maximize/optimize lead conversions
- Removal of embedded/rigid page templates to allow flexible updates via CMS
- Improve user flow from entry → product → lead
- Improve clarity across product categories, solutions, and applications
- Support modern SEO best practices for maximum inbound traffic
- More focus on social proof via testimonials, case studies, success stories
- Support for multi-language content
- Salesforce.com integration
- An infrastructure that feeds AEO best practices for maximum exposure and traffic
- Easy creation of campaign specific landing pages for inbound paid search and advertising traffic
- Different journeys for interest leads vs. intent leads
- Create a flexible, scalable CMS structure that supports future growth
- Maintain brand consistency while modernizing the visual and UX experience

BellatRx Brand DNA Map

Current Challenges

- Page layouts are locked into embedded Wordpress templates with a developer required for basic changes
- Navigation is complex and not intuitive for first-time visitors
- Adding new products or solutions requires workarounds
- Homepage does not immediately communicate who we are and what we do
- Limited flexibility for future growth

What Success Looks Like

- A flexible, modular CMS (no hard-coding) with customizable/flexible pages
- Allows multi-user access easily with permissions
- Clear navigation that mirrors customer thinking (with sticky menu)
- Homepage video that introduces BellatRx within seconds
- Easier content updates without developer support
- Clear, advanced Calls-To-Action throughout the site
- Mobile first design that allows tracking for calls, emails, forms, and more fully into Salesforce.com

Outcome Example:

A visitor searching for a **liquid filling machinery solution** should be able to:

1. Enter through SEO-driven category/industry pages
2. Understand available technologies (monobloc, inline filler, pump type)
3. Compare options clearly
4. Have a clear and relevant CTA at their fingertips (RFQ, contact sales, download brochure, book a call, call us directly)

Scope of Work

Impacted Areas

- Full website redesign (front-end and back-end)

Estimated Page Count

- Approximately **100 pages**, including:
 - Core pages
 - Product categories
 - Individual product pages
 - Resource and marketing content

CMS Preference

- **Current site is in WordPress**
- Alternative CMS is okay upon approval
- Must support:
 - Custom page templates
 - Modular content blocks
 - Multi-user permissions (BellatRx marketing team, agency, SEO vendor, content vendor, etc.)
 - SEO-friendly structure
 - AEO-friendly structure

Primary Website Functions

1. **Lead Generation**
2. Sales Enablement
3. AEO - foundation for discovery from AI tools (pages, layout, content)
4. Brand credibility, education, thought leadership, subject matter expertise

Design & UX Requirements

Design Goals

We are looking for a **clean, modern, and professional design** that reflects:

- Trust
- Credibility
- Engineering expertise
- Innovation
- Customer Focus
- Partnership

The site should feel **polished, intuitive, and uncluttered**, with strong visual hierarchy and clear messaging and clear calls to action.

Brand & Visual Style Requirements

- Consistent use of BellatRx brand colors, fonts, and logo
- Modern, minimal aesthetic (not overly busy or template-like)
- Strong typography hierarchy for easy scanning
- High-quality imagery and custom iconography
- Clear, consistent calls-to-action throughout the site

UX Expectations

- Logical, scalable site architecture
- Intuitive navigation with clean menu for deep links for customer journeys (not confusing or overly deep menus)
- Mobile-responsive and optimized for all screen sizes
- Fast load times and optimized performance
- SEO-friendly structure (clean URLs, schema-ready, heading hierarchy, more structure and categorization)
- Clear user journeys from landing pages to conversion
- Easy-to-update content areas for non-technical users
- Products grouped logically (Fillers, Cappers, Labelers, etc.)
- Industries grouped logically with unique content that speaks to each industry
- Users can reach any key page in 2–3 clicks
- Move away from accordion style pages
- Future support for Live Chat options
- Future support for Blog content
- Highly improved search function and search result pages
- More personal, featuring people more to the extent possible (our team and customers)

Example

Marketing should be able to, without developer intervention:

- Add new product pages
- Update specifications
- Publish/edit news articles
- Publish/edit trade shows/events
- Update contact links and contact forms
- Add AEO content to products/categories for deep AI findings
- Update SEO appropriate tags and metadata
- Add a video or image to a gallery
- Create a new landing page for a campaign
- Publish/edit blogs (future state)

Page Structure & Templates

Home Page

The homepage should support multiple flexible content areas, including:

- Hero slider (carousel) or video
 - Example: <https://aesus.com/>
 - Example: <https://www.douglas-machine.com/>
 - Example: <https://www.delkorsystems.com/>
- Structured, flexible content sections/blocks (image + text, dual content boxes)
- Free-form sections for campaigns, launches, or featured solutions

Product Category Pages

- Overview of machine types in that category
- Filtering or grouping options
- SEO-focused content blocks
- Clear pathways to individual product
- Considerations for AEO deep content (on page, in a subpage, etc.)

Product Pages

- Technical overview and specifications
- Key features and benefits
- Industries served (Break up into matching industries in Salesforce)
- Media (images, videos) – featured prominently at the top
- CTAs (RFQ, Contact, Download)
- Links to complementary/related equipment
- Considerations for AEO deep content (on page, in a subpage, etc.)

Industry Pages

- Should be unique landing pages in our 8 key industry areas:
 - Pharmaceutical, Nutraceutical, Biotechnology & Diagnostics, Food, Beverage, Cosmetics, Chemical, Personal Care
- Ability to add more industry pages in the future, if needed
- Ability to put many different types of content on the page and reorder content as needed
- Ability to link directly to products that are most relevant to industry
- Ability to post unique downloadable content and get customers into email nurture campaigns based on industry
 - Example: <https://ryson.com/industries/food-beverage/>

Standard Content Pages

- About Us
- Company Overview
- Aftermarket (Parts & Service – include PMMI Certified Trainer seal):
 - Example: <https://www.ossid.com/parts-and-service/>
 - Example: <https://ryson.com/parts-and-service/>
 - Example: <https://www.polypack.com/parts-and-service>
- Events/Trade Shows
- News (press releases)
- Careers
- Testimonials/Case Studies/Success Stories

Media & Resource Pages

- Video Library
- Image Gallery/Library
- Brochure/Sales Sheets Library
- Playbooks (Lead Magnets)
- Customer Logos Page
- Search Results Page

Back End & CMS Requirements

CMS & Admin Experience

- Custom page templates and reusable modules (kitchen sink style editor for page flexibility in appropriate sections)
- Standardized and templated product pages with some flexibility for content
- Easy content editing for marketing users
- Logical content taxonomy

- Scalable structure for future products, product categories, and technologies
- Ability to create child pages within key areas (news, trade shows, products, etc.)
- Role-based access and permissions (depends on internal or external users)
- Blog capabilities for future use (not used at launch but can scale into it later)

Lead Generation & Integrations

- CRM: **Salesforce**
- Marketing Automation: **Pardot/Marketing Cloud Account Engagement (MCAE)**
- Lead Forensics
- Microsoft Clarity
- Google Suite (Analytics, Adwords, Tag Manager, etc.)
- Lead capture forms (contact, downloads)
- Clear conversion tracking and attribution paths

Outcome Example:

Forms should enable sales teams to understand intent and context and capture lead data for the following:

1. Product
2. Industry
3. Source page
4. Campaign (Salesforce/MCAE)
5. UTM

SEO & Performance Expectations

- SEO-friendly page architecture
- Support for on-page SEO (meta data, schema, internal linking)
- Redirect strategy from existing URLs
- Page speed optimization

AEO & Performance Expectations

- Q&A formats
- Featured snippets
- PAA boxes
- Schema markup
- Voice search
- Other considerations (we're not experts here, need guidance)

Deliverables

Information architecture & sitemap

- UX wireframes

- Visual design concepts
- Fully developed website
- CMS configuration and documentation
- QA testing
- Updated Tag Manager
- Verification of integration with outside services (Salesforce, MCAE, Lead Forensics, etc.)
- Launch support
- Post-launch support period
- 301 Redirects

Vendor Qualifications

Proposals should include:

- Relevant B2B / industrial website experience
- Examples of similar-scale projects
- Team structure and roles
- Proposed timeline
- Budget range and assumptions
- Ongoing support options

Proposal Evaluation Criteria

Proposals will be evaluated based on:

- Understanding of project goals
- UX and architecture approach
- Technical capability and scalability
- Design quality
- Relevant experience
- Timeline and cost transparency
- Fit with BellatRx marketing team

Project Timeline

Target Launch Date: August 15, 2026

This will give us ample time before this year's PACK EXPO to get campaigns and other things in place to route properly to the new website.
